

SETTING UP ENVIRONMENT

CREATE FLASK PROJECT

Step 1: Beginning the Flask installation with python installation from the official account:

<https://www.python.org/>.

Run the python setup and install the newest version of python.

Step 2: Open Command Prompt and cross-verify the installation of python by typing:

To check the version : **python --version**

To check the path : **pip --version**

Step 3: After python installation, we need to begin with flask installation by typing :

Flask installation : **py -m install flask**

```
C:\WINDOWS\system32>py -m install flask
C:\Program Files\python\python.exe: no module named install

C:\WINDOWS\system32>py -m pip install flask

  DEPRECATION: MarkupSafe is being installed using the legacy 'setup.py install' method, because it does not have a 'pyproject.toml' and the 'wheel' package is not installed. pip 23.1 will enforce this behaviour change. A possible replacement is to enable the '--use-pep517' option. Discussion can be found at https://github.com/pypa/pip/issues/8559

Step 5: Now to run a simple project open VS Code and type the following:

```
from flask import Flask app = Flask(__name__)

@app.route("/") def hello_world():

return "<p>Hello, World!</p>"
```

And save the file as “app.py” copy its path and run it in the command prompt along with syntax **flask run**
